This guide facilitates identification of select Klaire Labs® probiotic formulations showing benefit in specific clinical conditions based on clinical research. One to three bullets are used to designate the strength of the research support. One bullet indicates that a component of a Klaire formulation has been shown to have benefit. Two bullets indicate moderate and three bullets indicate strong research support for a Klaire formulation. No bullet indicates research has not found a probiotic benefit in the clinical condition.

Blank = No species in the formulation has been shown effective for the condition.

- = One or more species in the formulation has been shown effective for the condition.
- = One or more species in the formulation has been shown effective for the condition and the potency of at least one of these species is similar to that demonstrated to be effective in the literature.
- = One or more species in the formulation has been shown effective for the condition and the potency of at least one of these species is greater than that demonstrated to be effective in the literature or multiple studies have shown one of the species to be highly effective.
